

## The Documentation of the Website:

Day 1 -

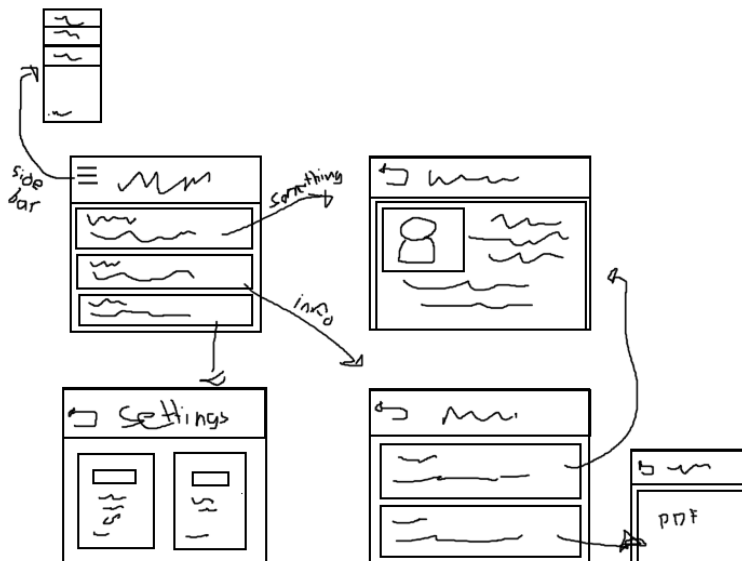

First before I made the website our teacher signed us to create a website with a criterion Aka that I need to put a lot of needed requirements to the Website to create it, but lucky for me I picked the low requirements needed just to create this website and not to put a lot of work on my to do list.

Day 2 -

I was too busy to do the website since I had to do my school work and sportsfest. But I did add a code Aka one line of code that say `<!DOCTYPE html>`

Day 5 -

I skipped 3 to 4 since I did nothing on those days anyways on day5 I made the wireframe of the website to give my self an idea for my layout.

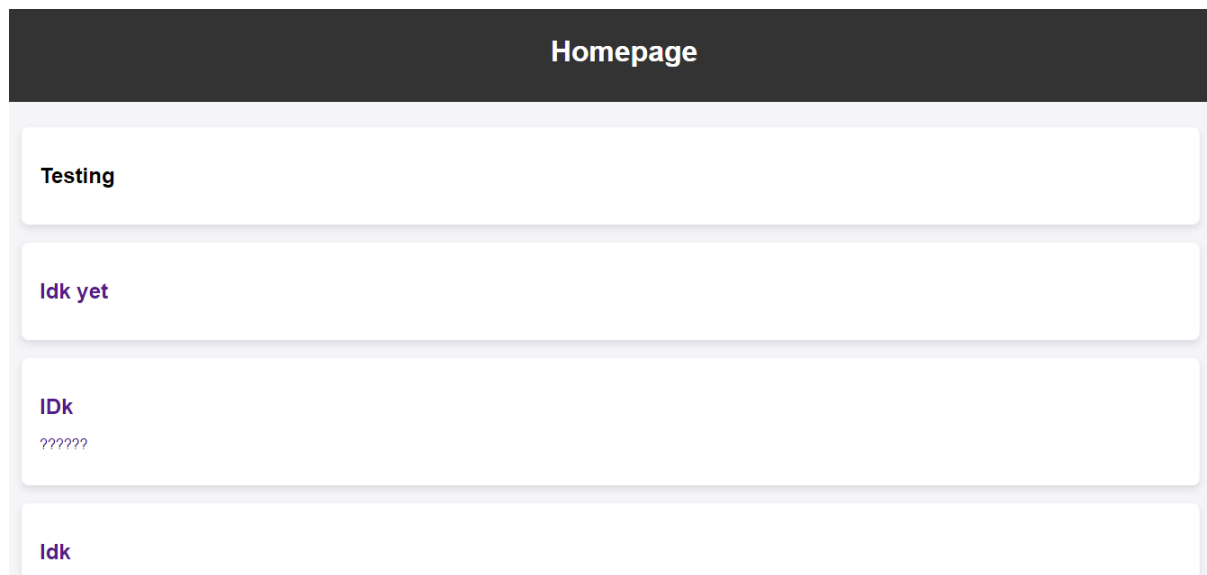

Day 6 –

On day 6 I learned how to do styling on the website so I can do the things that I want on my wireframe but sadly I did not start coding the Website yet

Day 9 –

Skipped Day 7 and 8 since I was doing nothing for the website but I did learn how to style/CCS with the information that I have I started coding the website and finally added the layout but some of the idea that I have for the website layout did not work sadly, So I made it easy to add stuff with the new layout that I have its still similar to the wireframe that I have but I little easier this time.

Day 10-

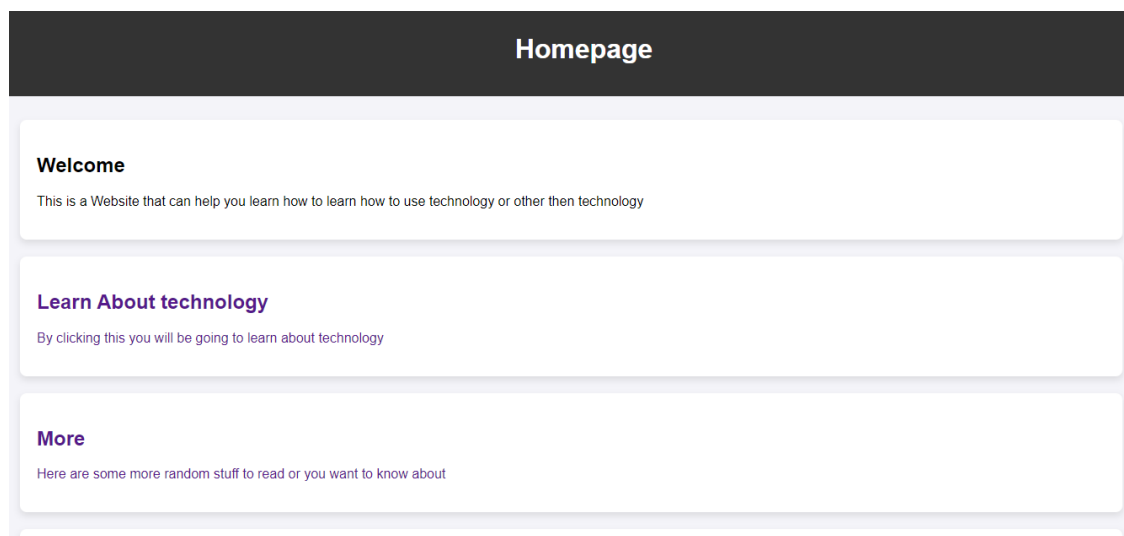

I did nothing

Day11 –

I was too busy to do the website/I was too lazy

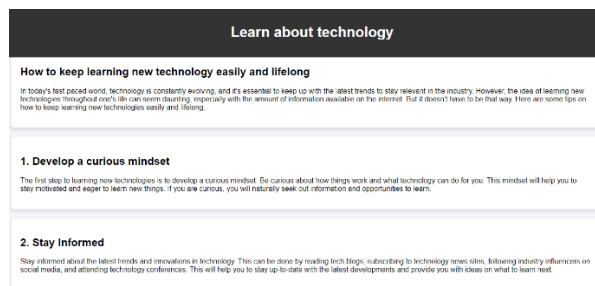

## Day 12 -

I skipped day 10 and 11 since I was doing nothing for the website anyways for day12 I made the website functional and started to actually add text to the homepage.

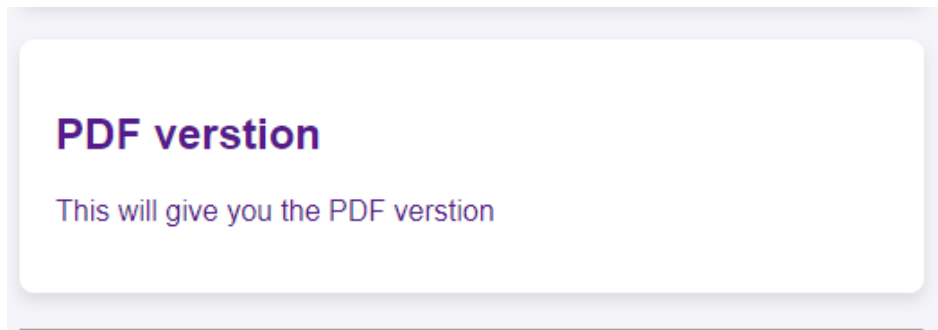

## Day 13 –

I made another html file for the buttons to move to the website from one to the other and did the same thing for the rest of the buttons to actually function. And I started working on information that I need to bring on the website also added PDF version button if they want to have the information in PDF or none PDF.

The other html file

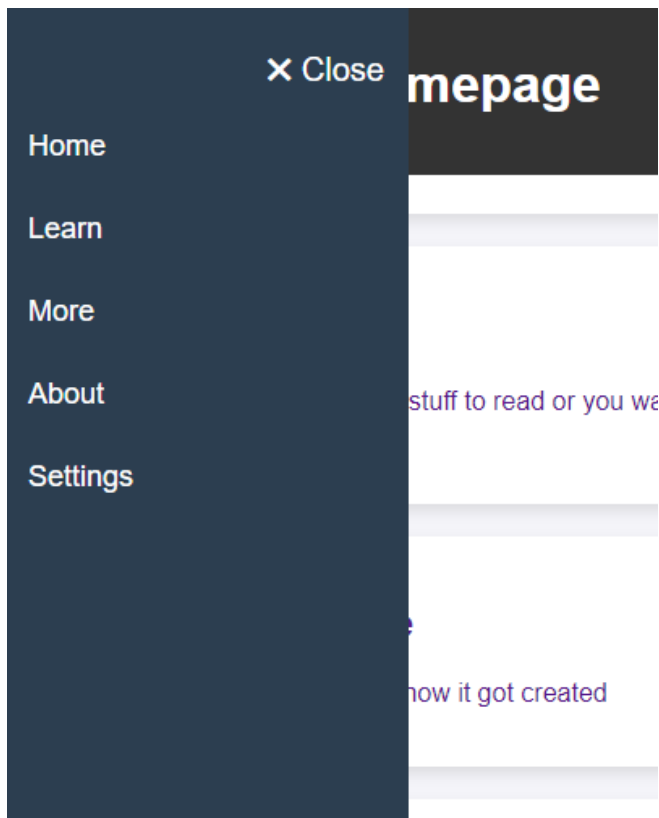

The PDF version that I put

Don't mind the wrong spelling on the button I will fix that on day14

Day 14 -

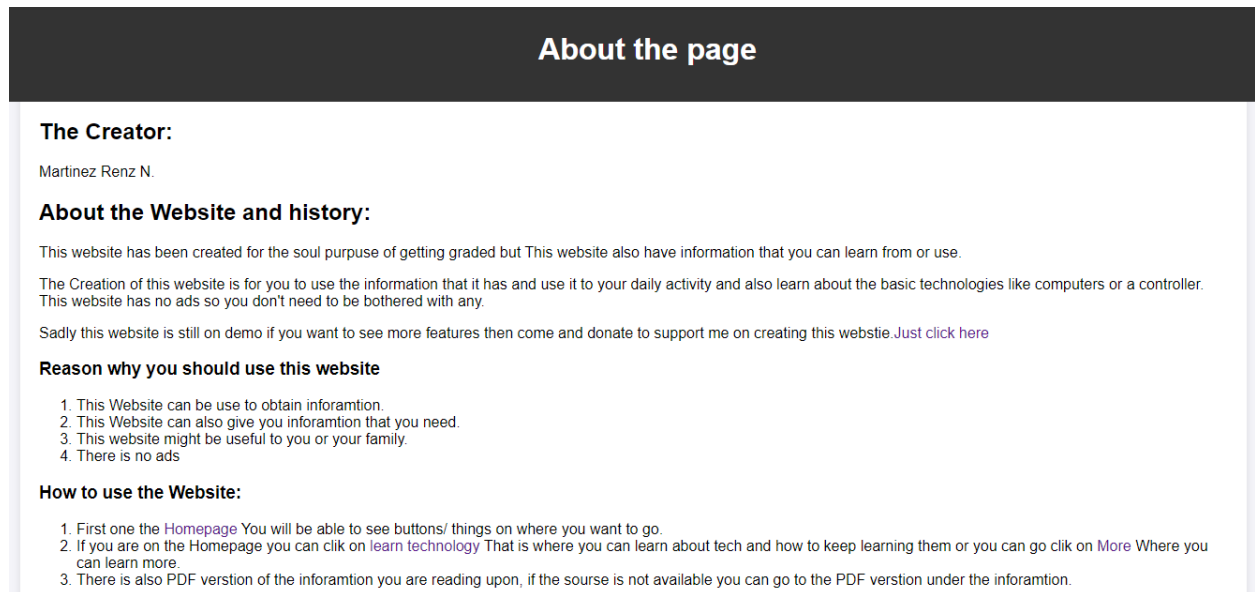

On Day 14 I fixed the spelling on the buttons that I have and I also tried learning java just to create a side menu for easy usage for mobile users. And added settings but I feel like I'm lazy to do the settings anyways either way its there I might do it on day15 or something, If I have time and I also added a About the website page

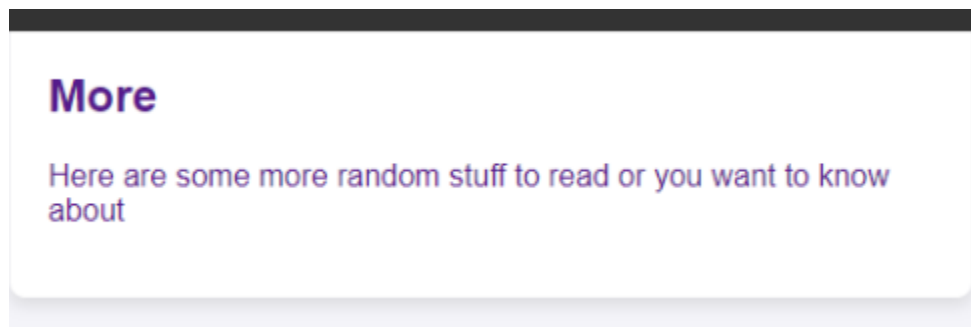

The Side menu that I was talking

about

This is the homepage that I did

And I forgot to mention I also added a More button if you want to learn more but there are only 2 items there 😅

Day15-

This is where it ends, I never finished the settings area sadly but it is what it is anyways for day 15 I just finished up and fix some bugs.

– The end of the documentation –
